Healthy Snacks for a Healthy Body

How does snacking boost metabolism?

Your metabolic rate is the pace at which your body burns fat and food for energy. The more frequently you eat, the more your body is at work burning energy hence keeping your metabolism going. Therefore eating more frequently allows you to burn fat more efficiently.

How often should you be snacking?

One should consume small portions of food every 2-3 hours (5-6 small meals) during the day. Studies show that people who add snacks to their diet (eat six times a day), have a faster resting metabolic rate than those who just eat three larger meals a day.

What happens when you skip meals or snacks?

If you are skipping breakfast, having a small lunch and then over-eating in the evenings, your body begins to feel deprived in the day and will hold onto the food consumed later in the day as a safety mechanism. It will start to shunt consumed calories to the adipose (fat) tissue for storage because the body "knows" it won't be fed for another 6-7 hours, and will start 'holding' onto the ingested food. Therefore, by ensuring you are eating six small meals each day, your body will begin to burn the calories you are taking in for energy right away. If the body "knows" it will be fed again in a couple of hours, storage won't happen. This, in turn, burns fat and calories more efficiently!

Healthy Snack Ideas

Yogurt parfait (3/4 cup)	◆ Oatmeal (3/4 cup)	Almonds (1/4 cup)
Skim Milk (1 cup)	Fig Bars (1 bar)	Fruit (1 medium sized or ½ cup)
◆ Plain Popcorn	Applesauce (1/2 cup)	Cottage Cheese and Pineapple
(2 cups)		(1/2 cup)
Boiled Egg (1)	Granola bar	Cereal (30g) with fruit

- Whole Grain Crackers and Cheese (4 crackers, 50g cheese) ♣ Dried Fruit Trail Mix (1/4 cup)
- Veggies and Low Fat Dressing/Dip (2 tbsp of dip, 1 cup of veggies)
- Bagel with peanut butter (1/2 bagel, 2 tbsp of peanut butter)
