# What are Antioxidants?

Antioxidants are present in foods which contain vitamins, minerals, carotenoids, and polyphenols. Many antioxidants are often identified in food by their distinctive colors—the deep red of tomatoes; the orange of carrots; the yellow of mangos; and the blue/purple of blueberries, and grapes. Vitamin C, Vitamin E and selenium are antioxidants which play a role in health maintenance and possibly, in disease prevention. Carotenoids are other compounds that may also have antioxidant benefits and include beta-carotene, lutein and lycopene. Scientists are studying how these antioxidants may prevent heart disease, cancer, cataracts and other conditions that occur as we age.

### How they work

Oxidation, or the loss of an electron, can sometimes produce reactive substances in the body known as free radicals that can cause oxidative stress or damage to your cells.

Antioxidants, by their very nature, are capable of stabilizing free radicals before they can react and cause harm. Because oxidation is a naturally occurring process within the body, a balance with antioxidants <u>must</u> exist to maintain health.

### Here are some suggestions on how to increase the antioxidants in your diet

- ✓ <u>Aim to reach 5-10 servings of vegetables and fruit every day</u>. These foods are rich in vitamin C and beta-carotene. If you smoke, be sure to grab an extra serving or two since you need more vitamin C than non-smokers.
- <u>Choose the most colourful veggies, fruits and juices</u> when deciding on which ones to eat. Dark green, red and orange vegetables pack in the most amounts of beta-carotene, lutein or lycopene.
- $\checkmark$  <u>Vitamin C</u> is lost during storage time and when it is cooked in water so try to eat fruits and vegetables when they are fresh and raw, as much as possible.
- Vegetable oil is an excellent source of <u>Vitamin E</u>! Try adding a small amount of this oil when cooking or preparing foods. Sunflower, canola, safflower, and olive oil are great choices.

## Tea and Antioxidants

Some recent studies are suggesting that green, black and oolong teas contain antioxidants called polyphenols and catechins. Drinking tea may also protect against cancer, heart disease and stroke so try substituting tea for coffee for a healthier choice!

#### **Excellent Sources of Antioxidants!**

Vitamin C	Vitamin E	Selenium	Carotenoids
citrus fruits and juices, apple juice, kiwi fruit, strawberries broccoli, brussel sprouts, peppers, potatoes, tomatoes	vegetable oils, wheat germ, nuts, seeds, peanut butter, papayas, avocadoes, sweet potatoes	brazil nuts, grain products, wheat germ, wheat bran, oat bran, fish, shellfish, meat, poultry, eggs, beans	carrots, cantaloupe, sweet potatoes, pumpkin, broccoli, pink grapefruit, tomatoes, dark green leafy veggies
